

TRMS Real-Time 3D Mapping Solution

No Loss in Precision, High Fidelity Output

Our system is designed to streamline workflow with an "On-the-Fly" capability, where data can be transmitted while drones are still in operation, allowing for immediate data processing. This Real-time transmission and computation process ensures that there is no loss in resolution, guaranteeing high fidelity in the final output. The result is crystal-clear, high definition deliverables produced without any compromise on accuracy or quality. The generated light-weight 3D model can be browsed in real-time by multiple users on various mobile and virtual reality devices and it can easily be pushed to big screens in control rooms thousands of miles away.

Real-time

Real-time transmission and computation allows for immediate data processing, saving precious and critical time

Highly Automated Workflow

From automated flight path to data transmission and processing, minimal human operation needed

High Fidelity & Precision 3D Models

Crystal-clear, lightweight 3D model produced can be easily pushed onto remote big screens

- > Overcome traditional problems of unconstructable details caused by aerial images taken from obstructed angles.
- > Fully restore the real-world environment with a user-friendly interface.
- > Uses 3D data formats that are universally compatible.
- > Allows for direct measurement of distance, area, and volume.
- > A lightweight, progressive-loading data format enables full-resolution review even with low bandwidth.
- > Achieve lossless resolution and texture of 3D models from original images

TRMS Real-Time 3D Mapping Processing Hardwares

Tiki3D
Advancing Photogrammetry

TWS 3S

Latest Performance Specification

| Computing Nodes | 1 nodes |
|-----------------|--|
| CPU | Support latest mobile Intel i9 14900 |
| Graphic Card | NVIDIA RTX4090 GPU, Core frequency>2300MHZ |
| Memory | 128G DDR5 |
| Storage | Storage 4T NVMe SSD and above |
| Network | Public network module, WiFi, RJ45 module, 4G SIM card, WLAN module |
| Display | 1920 × 1080 × 3 |
| Power | 800 PSU |
| Size | 490×250×410mm |
| Weight | 16kg |

TWSmini Mobile GPU Workstation

Latest Performance Specification

| Computing Nodes | Option of 6 or 10 nodes |
|-----------------|--|
| CPU | Support latest mobile Intel i9 14900 |
| Graphic Card | NVIDIA RTX4080 GPU |
| Memory | 64G DDR5 |
| Storage | Fast NVMe SSD Storage (from 8TB Intel U.2 SSD) |
| Network | 10Gbps Ethernet Port |
| Display | Starting from 2560 × 1440 @ 144Hz |
| Power | 1000~4000PSU |
| Size | 0.06 cbm |
| Weight | 16-30kg |

TWS Rack (High-Density GPU Server Solution)

Support latest Intel i9/ AMD R9 CPUs

NVIDIA RTX40 series & AMD RX7900XTX GPUs

Capable of running 3-4 software engines,
instant productivity boost

24/36 Nodes per rack

Fiber-Optic Internet port allows for high-speed
data transmission
